was also conducted in late 2024, with data interpretation ongoing in the first quarter of 2025.

Moreover, offshore echosounder surveys supported geological model updates and environmental monitoring.

As for the Orange River deposits, modelling and financial evaluations progressed, with additional reverse circulation (RC) drilling and bulk sampling planned.

Namdeb, a 50:50 joint venture between De Beers Group and the government of the Republic of Namibia, got the approval of a new long-term business plan that will extend the current life of mine (LOM) for Namibia's

> Visit us at: thevillager.com.na

land-based operations as far as 2042.

Under the previous business plan, the land-based Namdeb operations would have come to their end towards the end of 2022 due to unsustainable economics

However, a series of engagements between the Namdeb's management team and the Namibian government has enabled the creation of a new, mutually beneficial business plan that extends the life of mine by up to 20 years.

As part of the plan, the Namibian government has offered Namdeb royalty relief from 2021 to 2025, with the royalty rate during this period reducing from 10% to 5%. erastus@thevillager.com.na

# NDP 6 Projections a Beacon of Hope

President Netumbo Nandi-Ndaitwah on Monday launched the sixth National Development Plan (NDP 6), set to run from 2025 to 2030

Opening her statement on the occasion, President Nandi-Ndaitwah outlined that with the responsibility bestowed upon her by the nation, the achievements of her first 100 days laid the ground for the launch itself.

"[The] Oath of Office that I took on Inauguration Day mandates me to speak and take decisions on behalf of the Namibian people, and to lead the National Development Agenda. Therefore, I am here today to launch the sixth National Development Plan and to account to the nation on the steps taken, as well as notable achievements attained during the first 3 months of the 8th administration," the president outlined.

Projections from the full policy document outlines that there are four key pillars for the country to focus on: Economic Growth, Transformation and Resilience, Human Development and Community Resilience, Environmental Sustainability, and Effective Governance and Public Service Delivery.

For the projected economic growth, Namibia has to create 30 000 jobs in its green sectors, reach the Gross National Income per person target of USD 6 900, reach a rate of 75% employment in the country, achieve 80% local food production, and attain a 4% nuclear industry contribution to the GDP, to mention but a few goals.

## OPTIMISTIC FUTURE

The Villager spoke to economic analysts Almandro Jansen from Simonis Storm and Mihe Gaomab from the Namibian Economic Society (NES) regarding the optimism that was viewed on the launch of NDP 6, with both indicating that there was reason for it.

"From the start it looks more grounded when it comes to optimism compared to the previous that was more focused on the goals that need to be obtained. It is also rooted in measured accountability and frequent reports on what is going to happen, and I think it's a step in the right direction," Jansen explained.

Citing the message of the policy document itself, Jansen also indicated that there is a decisiveness to the NDP 6.

"There is an optimistic outlook with the introduction of the NDP 6. The element of pragmatism and inclusivity of how the president wants to strategically deliver the goals indicated in the plan is evident. Obviously, 100 days is a small period to judge the president and her cabinet's impact so far," Gaomab indicated.

"The president has set a course of where we want to be, and there are many detractors who would say that the Vision 2030 has failed, but the policy document for Vision 2030 is actually an inspirational policy of an umbrella outline of where Namibia has to go," Gaomab added.

On the subject of President Nandi-Ndaitwah's report of her first 100 days in office and whether there are any tangible indicators correlating to the plan's launch, Jansen indicated that there are signs in these 100 days of things that are cleared out that should not be there.

"Governance was one of the points, and government performance in terms of service delivery was emphasised in the plan as well," Jansen noted.

In the Effective Governance pillar, the NDP6 indicates that a 100% compliance rate has to be in place by 2030 with labour and employment legislation.

A national security strength of 52%, a 50% rating of integrated statistical and geospatial systems, and an Ibrahim Index of African Governance rating of 75 all serve as added indicators of effective governance. Namibia currently has an Ibrahim Index ranking of 63 in the 2024 report.

This paints a stable overall governance picture of Namibia in terms of the quadrants that a country is measured under in the report: Security and Rule of Law, Participation Rights and Inclusion, Foundations for Economic Opportunity, and Human Development.

## **NATIONAL NEWS**

# Thriving Rice Projects in Oshikoto

1 nise Shiin

Farmers in the Oshikoto region are experiencing remarkable success following a fruitful harvest last week.

The University of Namibia's Ogongo campus, in collaboration with the Ministry of Agriculture, Fisheries, Water, and Land Reform, trained approximately 63 individuals, equipping them with essential skills for rice cultivation. However, only three farmers from Oshikoto seized this opportunity and embarked on rice production, achieving significant success.

In a recent interview with Eagle FM, Festus Amumwe, a rice grower from Onayena in the Oshikoto region, shared his motivation for entering rice production, noting a lifelong desire to produce food for his community.

"When I was younger, my parents would often send me to the shop. I would see rice on the shelves and wonder where it was grown. I started cultivating tomatoes, and in 2020, I sought guidance from the Ministry of Agriculture in our region to learn where I could acquire seeds and the skills to grow rice," he said

Amumwe further mentioned that officials from the Ministry of Agriculture and Ogongo Campus provided him with training and free seedlings to kick-start his rice production in 2024.

Reflecting on last year's harvest, Amumwe experienced failure due to inadequate rainfall, resulting in an insufficient yield of only a 25-litre bucket.

"This year, I am excited to say my dream is coming true, I had a successful harvest for the first time, yielding a 50kg bag. I believe next year will bring even greater success." he stated.

He expressed gratitude to Ogongo Campus for imparting knowledge and providing seedlings.

"Rice is a staple that is highly consumed in our country, and I have no trouble selling it, my customers regularly enquire if I have more," he stated.Despite the high demand and favourable market conditions, Amumwe called on the government for support to assist emerging farmers with processing machinery.

"At the moment, I have to travel to Ogongo Campus to process my rice since they are the only ones equipped with the necessary machines. I appreciate their assistance, which is provided for free, but it would be beneficial to process our own produce," he said.

He also mentioned that he sought machinery assistance from the Ministry of International Relations and Trade, but was informed he did not qualify due to criteria that include land ownership, which he currently lacks, as he uses only a small portion of his parents' field.

"It is high time the government revisits those criteria to include everyone who requires support, particularly those already producing. Right now, I am using a hoe to cultivate, but if the government could meet us halfway, we could scale up our efforts, as machinery is much more efficient than manual labour," he urged.

Additionally, Vaino Namushinga, another farmer who harvested rice last week in Oshikoto, shared that this year's yield was also 50 kg for him.

He encouraged more young people to seize opportunities in rice production or other high demand crops. "I failed grade 12, but I didn't stay home doing nothing. I started a garden and sought information about various crops, including rice, which I believe was one of the best decisions I've made," he stated.

Another rice producer, Samuel Amutenya, also harvested rice last week and reported good yields, though he noted that as a result of planting his crops later than intended, last year showed more success.

"This year, I harvested 50kg and a half, while last year I collected two bags of 50kg each. Next year, I plan to expand my field by replacing millet with rice, as rice is more beneficial and has a higher demand," he explained.

When comparing prices, Amutenya mentioned that 20 litres of rice can fetch N\$ 2000, while a 25-litre bucket is priced between N\$ 170 and N\$ 200.

"The primary challenges we face are the need for machinery and adequate water supply, especially during dry spells. We appeal to the government for resources that will enable us to thrive without difficulties," he pleaded.

At the harvesting ceremony, the Governor of Oshikoto, Sacky Kathindi, expressed his appreciation to the Ministry of Agriculture for its ongoing training and support for farmers and citizens across the country.

"These capacity-building initiatives are empowering communities and strengthening our agricultural sector. Food security remains our foremost priority, and projects like these rice fields bring us closer to achieving that goal," he stated.

He commended the dedication of farmers and encouraged all stakeholders to continue investing in agriculture for the betterment of the region and nation.
