

ANNEXURE 1

FORMS

Form 1

REPUBLIC OF NAMIBIA

ENVIRONMENTAL MANAGEMENT ACT (No. 7 of 2007)

(Section 32)

APPLICATION FOR RENEWAL OF THE ENVIRONMENTAL CLEARANCE CERTIFICATE- APP:

006723

PART A: DETAILS OF APPLICATION

1. Name: Victoria Ndahalaumbo Shamhe
2. Business Registration/ ID #: 781021000273
3. Correspondence Address: P.O Box 99284, Windhoek
4. Name of Contact Person: Mrs. Victoria Ndahalaumbo Shamhe
5. Position of Contact Person: Owner
6. Telephone No.: +264 (81) 277 8212
7. Fax No: N/A
8. E-mail Address: victoriashamhe@yahoo.com

PART B: SCOPE OF THE ENVIRONMENTAL CLEARANCE CERTIFICATE

1. THE ENVIRONMENTAL CLEARANCE CERTIFICATE IS FOR:

The 'listed activities' that might be affected are listed below:

3.1 The construction of facilities for any process per activities which requires a license, right or other form of authorization, and the renewal of a license, right or other form of authorization, in terms of the Minerals (Prospecting and Mining Act), 1992.

3.2 Other forms of mining or extraction of any natural resources whether regulated by law or not.

3.3 Resource extraction, manipulation, conservation and related activities.

2. DETAILS OF THE ACTIVITY(S) COVERED BY THE ENVIRONMENTAL CLEARANCE CERTIFICATE:

2.1 Title of Activity

Environmental Clearance Certificate (ECC) Renewal For the Proposed Activities On Exclusive Prospecting License (EPL) No. For No. 7273 Located In The Windhoek District, Khomas Region Of Namibia.

2.2 Location of Activity

The Proposed Activities On Exclusive Prospecting License (EPL) No. For No. 7273 Located In The Windhoek District, Khomas Region Of Namibia.

2.3 Nature of Activity

The nature of the activity is associated with the planned prospecting and exploration activities. The main activities are as follows, with further details in the BID:

- **Desktop Study:** Geological mapping - this mainly entails a desktop review of geological area maps and ground observations. This includes the review of geological maps of the area and on-site ground traverses and observations and an update where relevant, of the information obtained during previous geological studies of the area.
- **Geophysical surveys:** Entails data collection of the substrata (in most cases service of an aero-geophysical contractor will be sourced), by air or ground, through sensors such as radar, magnetic and electromagnetic to detect any mineralization in the area and are conducted to ascertain the mineralization. Ground geophysical surveys shall be conducted, where necessary using vehicle-mounted sensors or handheld by staff members, while in the case of air surveys the sensors will be mounted to an aircraft, which then flies over the target area.
- **Lithology geochemical surveys:** Rock samples shall be collected and taken for trace element analysis to be conducted by analytical chemistry laboratories to determine if sufficient Base & Rare Metals, Dimension Stone, Industrial Minerals, Precious Metals, Precious Stones, and Semi-Precious Stones are present. Additionally, trenches or pits may be dug depending on the commodity (in a controlled environment e.g., fencing off and labelling activity sites) adopting manual or excavator to further investigate the mineral potential.

The pits will be small ($\pm 20\text{cm} \times 20\text{cm} \times 30\text{cm}$) enabling 1kg samples to be extracted and sieved to collect 50g of material. As necessary, and to ensure adequate risks mitigation, all excavations will either be opened and closed immediately after obtaining the needed samples or the sites fenced off until the trenches or pits are closed. At all times, the landowner and other relevant stakeholders will be engaged to obtain authorization where necessary.
- **Drilling:** Should analyses by an analytical laboratory be positive, holes will be drilled, and drill samples collected for further analysis. This will determine the depth of the potential

mineralization. If necessary new access tracks to the drill sites will be created and drill pads will be cleared in which to set the rig. Two widely used drilling options may be adopted, namely: the reverse circulation drilling and/or diamond-core drilling.

A typical drilling site will consist of a drill-rig, drill core, geological samples store, a drill equipment parking and maintenance yard (including a fuel and lubricants storage facility).

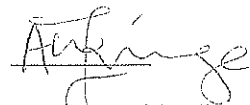

Please refer to the attached project BID for more details on the project description and activity requirements.

2.4 Scale and Scope of the Activity

The proposed activity will only entail the detailed exploration of economically feasible goods, namely: Base and Rare Metals, Industrial Minerals and Precious Metals on the EPL. The proposed activities are expected to last for about three years (36 months). The planned activities and required resources and infrastructure are presented in the BID attached.

PART C: DECLARATION BY APPLICANT

I hereby certify that the particulars given above are correct and true to the best of my knowledge and belief. I understand the environmental clearance certificate may be suspended, amended, or cancelled if any information given above is false, misleading, wrong or incomplete.

Aili N. Ipinge
